SYSTEMS WIRING & OPS RESCUE

Hi — saw ac.inference.sh/mcp on the Official MCP Registry with public MCP URL(s) including:

- <https://api.inference.sh/mcp>
- <https://sh.inference.ac>

I ran our free Connectors checker. Looks like the usual curl-works / UI-fails pattern. Top misses include authorization server metadata / S256 / PRM / unauthenticated MCP POST patterns.

Free checker: <https://github.com/GFB2026/mcp-oauth-connect>

Or paste a URL and hit Check:

<https://gfbbytes.com/products/mcp-oauth-connect/>

If useful, we can attempt Claude, Cursor, Desktop, and Grok against your origin and send an attach trace (\$149; refund if we can't say why). Fix work after that is quoted separately.

— Greg / GFB
